'Government reviewing 5G reserve pricing'

IT Minister Ravi Shankar Prasad also assures spectrum auction this fiscal

Scan & Share

S RONENDRA SINGH

Information Technology Minister Ravi Shankar Prasad on Monday said that the government was working on a review of the reserve prices for 5G spectrum for the upcoming auctions.

The Minister also assured that the auctions happen 'within this finan-

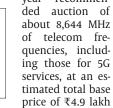

cial year'. "Spectrum auctions will happen within this financial year and we are also working on

the pricing of spectrum. We are in the process of reforms for spectrum pricing, so wait for sometime," he said, urging the telcos to wait for a few days for clarity.

Speaking at the India Mo-

bile Congress (IMC) 2019, Prasad said that the government was aware of the challenges being faced by the industry. His statement came amid widespread concerns over exorbitant pricing of radio waves, including 5G.

The Telecom Regulatory Authority of India (TRAI) had last vear recommen-

crore, but the financiallystressed industry had argued that the proposed prices are unaffordable and exorbitant.

Some industry players pointed out that the average price of 5G band auctioned in

Minister of Information Technology Ravi Shankar Prasad, with Vijay Shakhar Sharma, founder of Paytm, at the India Mobile Congress, in New Delhi, on Monday KAMAL NARANG

countries like South Korea, Spain, the UK and Italy works out to ₹84 crore/MHz, whereas TRAI's recommended price for the same band is five to six times higher at ₹492 crore/MHz.

Reacting to Prasad's statements on reserve pricing and auctions, RS Sharma, Chairman, TRAI, who also attended the biggest event on telecom in South Asia, said: "As a part of the process, we have already recommended the 5G base price. Now, it is up to the government to accept or modify it."

Ensuring Internet security Meanwhile, on WhatsApp and Facebook, Prasad said that India respects encryption but

identify source of messages wherever they are being circulated to fuel rumours and

Internet must be stable, safe and secure and "we must ensure this," he said. The issue of traceability has been a flashpoint between the government and WhatsApp. The Facebook-owned company has so far resisted India's demand for identification of message originators, arguing that doing so would undermine its policy on privacy and end-to-end encryption.

"We respect encryption but where the same message is being relayed repeatedly at the same time, the same area and on the same issue to create chaos and spread false rumours, law enforcement agencies must have access-...source of nuisance must be identified to deal with circulation of false rumours in such cases," added Prasad.

Paytm may garner \$2 b in new financing from backers

Paytm is close to scoring \$2 billion of new financing from investors including Jack Ma's Ant Financial and Japan's Soft-Bank Group Corp to fend off an influx of new rivals, said a person familiar with the

The funding will be split evenly between equity and debt and values the country's top online financial services firm at \$16 billion, the person said, asking not to be identified talking about a private deal. The talks are in their final stages but the terms could still change, the person

If a deal is finalised, Paytm could outstrip fellow highprofile Asian start-ups such as Grab and Gojek in valuation. Paytm founder Vijay Shekhar Sharma is raising capital to protect the start-ups share of a potentially \$1 trillion Indian

payments market from new entrants including Facebook Inc, Alphabet Inc's Google and Walmart Inc-owned Flipkarts PhonePe. Over the past year, a string of new apps have made payments increasingly easy, bringing discounts and cash bonuses to young, smartphone-savvy users.

Credit Suisse Group AG now estimates that the Indian digital payments market will touch \$1 trillion by 2023 from about \$200 billion currently. Its a market with huge potential: Cash still accounts for 70 per cent of all Indian transactions by value, according to Credit Suisse, and neighboring China is far more advanced with a mobile payments market worth more than \$5 trillion.

It is not clear how much SoftBank would contribute, but the Japanese company is going through a rocky

Mall biz to break even in a year: Sharma

PRESS TRUST OF INDIA New Delhi, October 14

Paytm founder Vijay Shekhar Sharma on Monday said that he expects Paytm Mall – the company's e-commerce unit to break even in a year's time.

Sharma added that Paytm will consider getting listed on stock exchanges only after 2021 when the financial services company starts generating cash. "Paytm Mall business is close to break-even, \$3-million EBIDTA loss a month and \$1.2-1.3 billion run rate. We do 2,75,000-3,00,000 orders a day. In festive season, this peaks to half a million orders a day," Sharma told PTI on the sidelines of the India Mobile Congress 2019.

Asked if more funds would be pumped into Paytm Mall, Sharma said: "We have \$260 million in the bank, so I would say that we can give more growth capital to it.

'German security rulebook to keep 5G door open to Huawei'

Frankfurt, October 14

A new German security rulebook will not exclude Chinese telecoms equipment maker Huawei Technologies from supplying gear for the country's 5G mobile networks, a senior government source said on Monday.

The 'security catalogue', due to be published this week, will confirm Germany's decision to keep a level playing field for suppliers to nextgeneration telecoms networks, despite calls by the United States to ban Huawei.

Operators had warned that banning Huawei could add years of delays and billions of dollars in costs to rolling out 5G networks in Germany that could power super-fast home

Operators warn that banning Huawei could add billions of dollars to 5G rollout cost in Germany

factories or, one day, self-driving cars. "Germany's approach did not and does not foresee any clause that would exclude any one company," a senior government official told Reuters, speaking on condition of anonymity.

The federal network regulator and cybersecurity watchdog have been working to finalise the rulebook after setting basic criteria in March on technical standards and governance at suppliers.

Network operators, all of them Huawei clients, have opposed Washington's calls to ban Huawei on concerns that its kit may contain 'back doors' open to cyber spies and that under Chinese law it must collaborate in state espionage efforts.

The company denies the allegations.

The EU last week warned of the risk of increased cyber attacks to next generation 5G mobile networks by Statebacked entities, but a report compiled by member states stopped short of naming China as a threat.

BSNL employees' union calls for hunger strike on Friday Strengthening their agitation further, the All Unions and Associations of BSNL (AUAB) has called for a one-day hunger strike on Friday to protest against non-payment of September salary and seeking timely payment of salary every

The unions' demands include revival of BSNL by immediate allocation of 4G spectrum, extension of financial assistance or soft loan, and approval for the PSU's land monetisation policy

"The decision to go for a oneday hunger strike was taken after AUAB's meeting today. Non-payment of contract and casual workers wages for the past 8 months, non-payment of electricity bills, misleading reports in media stating that BSNL would be closed down, among others were the agenda of the meeting," said one of the sources, who is close to the development. The meeting was attended by representatives from the Sanchar Nigam Executives' Association (SNEA), the BSNL Employees Union (BSN-LEU), the National Federation of Telecom Employees (NFTE), the All India Bharat Sanchar Nigam Ltd Executives' Association (AIBSNLEA), the National Union of BSNL Workers and the SC/ST Employees Welfare Association of BSNL (SEWA BSNL), among others attended the

Employees' unions such as the Sanchar Nigam Association of Telecom Technical Assistants (SNATTA), the BSNL Mazdoor Sangh (BSNLMS), the All India BSNL Executives' Association (AIBSNLEA), the BSNL Officers Association (BSNLOA) and the Telecommunication Employees Progressive Union (TEPU) were also present.

AUAB convened another meeting on October 21 to decide the future course of action, they added.

FTTH equipment

Separately, BSNL has also authorised procurement of Fibre To The Home (FTTH) equipment, with the PSU slated to issue purchase orders within 15

The PSU authorised the procurement of 3,200 optical line termination ports (OLTs) and 28,000 Optical Network Termination (ONTs) and splitters. BSNL's FTTH service — Bharat Fiber - delivers high-speed broadband from 256 KBPS to 100 MBPS, apart from IPTV and a range of voice telephony services.

On October 1, BSNL's unions and associations conducted a 'lunch-hour demonstration' on to protest against salary delay. Mahanagar Telephone Nigam Ltd (MTNL), the other PSU, has also started on a series of 'Lunch Hour Demonstrations' in protest of wage delays.

As per company policy, salaries at BSNL are credited on the last working day of every month. BSNL's salary expenses come

to about ₹750-850 crore, as the firm employs 1,63,902 personnel, of which 46,597 are execut-

+ Pune team wins IBM award for flood-prevention solution

PRESS TRUST OF INDIA

A team of Indian software professionals was awarded a prize money of \$5,000 by IBM for providing a potential solution to prevent pervasive flooding that plagues the Indian subcontinent, and help save lives and property, the technology giant announced.

Purva Suchak took the top prize in the IBM and David Clark Cause foundation Call for Code 2019 for Asia Pacific region announced on Saturday here.

The team consists of software professionals from Punebased Cognizant – Siddamma Tigadi, Ganesh Kadam, Sangeetha Nair, and Shreyas Kulkarni. By continuously checking reservoirs, dams and bodies of water. Project Purva-Suchak can collate data with weather forecast information, according to a statement.

This allows them to generate effective flood prediction data that can be stored on blockchain and accessed by

those who need the data most including government agencies and disaster management teams, the statement said.

Up to date and accessible data can prevent flooding and huge losses of life and property, it said. "When we started on the journey of IBM Call for Code, we first tried to identify the natural disasters that have a huge impact on the Indian sub-continent," Tigadi, team leader of Purva Suchak project, told PTI.

"So flooding was one of the issues we realised was not just an issue which lacked effective flood management but also needed a prediction and mitigation approach," said

The winner of the Call for Code 2019 Global Challenge is Spain-based Prometeo, a system that uses artificial intelligence (AI) and the Internet of Things to guard the safety of firefighters as they battle blazes. Prometeo was awarded \$2,00,000 for the project.

Course correction: Edtech start-ups turn to consolidation as investors' interest begins to wane

SANGEETHA CHENGAPPA

Bengaluru, October 14 Edtech start-ups space is expected to see some major consolidation over the next six months as investor interest wanes in start-ups that have failed to scale their businesses.

The first signs of consolidation showed up last May when iNurture Education Solutions which provides industry-related skills courses announced the acquisition of a similar skill-based Edtech platform, KRACKIN.

It was followed by the acquisition of job-skilling platform Acadview Software Private Ltd last October by UpGrad, an online education start-up that is promoted by entrepreneur Ronnie Screwvala. Recently, in June, Manipal Education & Medical Group (MEMG) acquired Jigsaw Academy, an online analytics and big data training start-up for students and professionals.

Over the last 6-12 months, bigger start-ups in the profes-

Start-ups displayed an interest to merge, sell out or be acqui-hired by larger start-ups ISTOCK.COM/IPOPBA

sional learning space like Great Learning and TalentSprint have been receiving a lot of inbound interest from a clutch of smaller start-ups in the same space, who wish to either merge, sell out or be acqui-hired by the larger start-ups. "When we started Great

Learning in 2012, Jigsaw was the most prominent player in Analytics. At first we partnered with Jigsaw, because we did not have any of our own analytics content. Over 12 months, we built our own content, assessments and expertise and became independent," said Hari Krishnan

He added, "We were profitable from the first year, booked revenue of ₹135 crore in FY19 and will end FY20 with ₹400 crore in revenue.' Nair added, "In the last 12

months, we have seen increasing interest by smaller companies, approach us to be acquired or acqui-hired. Over the next few months, you will witness further consolidation with 3-4 large players holding 60 per cent market share emerging in the professional learning space.

The MD and CEO of TalentSprint, Santanu Paul was approached by 2-3 start-ups looking to merge with the company. "We are clocking 50 per cent v-o-v growth and will close FY20 at the same growth rate. We play in an over fragmented market where some

start-ups have been unable to grow because of uncertainty about online education programmes working or not and Nair, co-founder and Director, academic institutions opening up deep-tech education programmes for working professionals. You will see the emergence of 3-4 large players and many smaller players in this space," said Paul.

Asked about consolidation in the professional skilling space, serial entrepreneur and partner GrowthStory.in, K Ganesh, said: "There is a dire need for professional learning companies to bridge the skills gap that exists in the country today. Large skilling start-ups will coexist with smaller start-ups as this is not a 'winner takes all' business unlike the cab-hailing, food delivery and e-commerce businesses. While there will be takers for big ticket, long term professional skilling courses that cost lakhs, there will also be a huge demand for smaller top-up courses that cost much

Telegram's cryptocurrency + launch hits SEC roadblock

BLOOMBERG

Telegram, a popular encrypted messaging app with about 300 million users, may postpone plans to launch its own cryptocurrency after the Securities and Exchange Commission (SEC) obtained a restraining order to stop the sale of the tokens in the US.

The company, which raised \$1.7 billion last year for its project, told investors that it is evaluating ways to resolve the agency's concerns, including potentially delaying the issuance of the tokens beyond its October 31 target, according to a note sent to investors and seen by Bloomberg News.

Investors bought rights for Grams – the digital coins – at a steep discount, with the opportunity to resell them at a reference price of \$3.62, almost three times the maximum cost of the rights, according to the SEC complaint.

The agency said that the fund-raising was illegal in the US because Telegram never re-

Telegram has raised over \$425 million from US investors

gistered its offering with the regulator, according to a filing made public October 11. Telegram raised more than \$425 million from US investors.

The company told investors that it has been in talks with the US regulator for the past 18 months regarding its project. We were surprised and disappointed that the SEC chose to file the lawsuit under these circumstances, the letter said.

The SEC has had long-standing concerns regarding the industry. The regulator has proven to be a major obstacle for the digital-token market in the past, preventing many from making ground in the US.

Sigma launches 'world's smallest', mirrorless digital camera in India

OUR BUREAU

Japan-headquartered Sigma Corporation, a leader global camera and lensmaker, launched what it claims the world's smallest and lightest full-frame mirrorless digital camera - Sigma fp, in India.

With a weight of 370g (without lens), the camera's body alone is priced at ₹ 2.15,000, while Sigma fp will cost ₹ 2,50,000 with Sigma 45mm F2.8 DG DN lens.

"Sigma fp is a new generation of camera that will revolutionise digital photography and film-making. There are several modes the camera can be used with, making it highly versatile and perfectly adaptable to different styles of photography or videography," said Ananth Seshan, Director, Shetala Agencies, which represents Sigma

The Sigma fp is compatible

with a wide range of accessories and with the overall dimensions 12.6×69.9×45.3mm, the camera is highly portable and can be comfortably used with drones and gimbals, for portraits, 4k streaming, in the field and more, according to a statement.

back-illuminated 35mm full-frame Bayer sensor with24.6 effective megapixels will support a full-fledged video production with 12-bit CinemaDNG external recording and 4K UHD/24fps recording.

Its key features include electronic shutter for a variety of settings, Superior options in artistic picture and video creations, advanced picture and video generating functions, seamless transition between Still and Cine modes. For raw video data, the

SIGMA fp supports 12-bit CinemaDNG external recording. With 4K UHD/24fps recording, it will produce video data that can be used even in filmmaking. The camera's use of the L-Mount standard makes it

compatible with a range of lenses from its L-Mount alliance partners such as Leica and Panasonic. The body is built from a die-cast aluminium alloy and is also dust and splash proof.

test after key backers quit REUTERS London, October 14

FB's Libra faces support

Facebook's Libra cryptocurrency faces a pivotal meeting of backers in Geneva on Monday, days after the woulddigital coin project suffered a severe blow as major payment firms quit.

Mastercard and Visa abandoned the Geneva-based Libra Association on Friday, as did eBay, fintech start-up Stripe and payments company Mercado Pago. Politicians and regulators

from the US to Europe said that Libra risks upsetting global financial stability, undermining users' privacy and facilitating laundering. PayPal started the Libra As-

sociation exodus this month, leaving Facebook without the backing of any major payments firms for the project, due for launch by June 2020. Libra said this month it would give details after the meeting of the 1,500 "entities" that have indicated "enthusiastic interest" to take part in the project. A spokeswoman did not im-

mediately respond to enquiries on the meeting of the Libra Association, whose remaining members include Vodafone and ride-hailing firms Uber and Lvft. It also includes non-profit

organisations, venture capital groups and blockchain firms, but the departure of major financial firms presents a stumbling block for Libra's efforts to convince regulators and politicians about the coin's safety. France last month pledged

to block Libra from operating in Europe, with the Bank of England laying out high hurdles it must meet before its launch. US Federal Reserve Chairman Ierome Powell suggested the project could not advance before concerns were

New iPad priced between ₹29,900

and ₹48,900

OUR BUREAU

New Delhi, October 14 Apple announced the availability of the new iPad launched at the company's event held in Cupertino in September this year. The tablet is priced between ₹29,900 and ₹ 48,900, depending on whether it is a

which starts out at 32GB. This is the 7th generation of the 'regular' iPad as opposed to tablets in the other series: iPad Mini, iPad Air and iPad Pro.
